

ARDANTI DEFENSE at MILIPOL 2023

After SOFINS and PARIS AIR SHOW, **ARDANTI DEFENSE** went to meet the internal security forces of France and foreign countries.

ARDANTI DEFENSE offers an innovative approach to anticipating and optimizing the implementation of protection resources for all types of sensitive sites and public and private OIVs (Operators of Vital Importance), by identifying threats, taking existing resources into account, highlighting vulnerabilities and proposing reinforcements.

A 3D model of the site, combined with the AnalytiX© 3D protection simulator, enables us to mathematically model the best solutions to be implemented to meet specific needs.

Simulation is also a real synthesis and decision-making tool for presentation to supervisory ministries and management boards, as well as an excellent tool for raising staff awareness.

ARDANTI DEFENSE highlighted its partnership with DCI Group to develop export consulting, training and capability support activities for the armed forces, particularly in the field of anti-drone warfare.

During his inaugural visit,
Gérald Darmanin,
Minister of the Interior and Overseas France,
took an interest in the support provided by DCI
Group and its partners to internal security forces.

About **ARDANTI DEFENSE**

ARDANTI DEFENSE is an independent French SME that designs and develops agile solutions for reinforcing site protection. The company is a member of GICAT, Cap Digital and Cercle de l'Arbalète.
